FOR FOUNDER-LED TEAMS WITH ENGINEERS

A clear senior owner for *technology.*

Technology leadership that stays close to the real product, delivery pressure, engineering team, and production constraints.

A strong fit when...

- Important technology decisions need a clear owner.
- Delivery is moving, but priorities and trade-offs drift.
- The team needs stronger practices and technical guidance.
- Production risk is growing faster than confidence.

What I take responsibility for

Work alongside the team—not above or around it.

01 · DIRECTION

Turn business priorities into technical choices.

Shape architecture, roadmap, sequencing, and trade-offs so decisions serve the business and remain coherent over time.

02 · DELIVERY

Make progress more predictable.

Clarify what matters now, expose dependencies and risk, and improve the path from commitment to reliable release.

03 · ENGINEERING STRENGTH

Raise capability inside the team.

Coach engineers, improve review and decision practices, and build ownership that stays with the organisation.

04 · PRODUCTION HEALTH

Strengthen the system that is already live.

Bring security, reliability, operability, and change confidence into everyday technology decisions.

What changes

- ✓ Clearer technology decisions
- ✓ Stronger engineering capability
- ✓ More predictable delivery
- ✓ Fewer avoidable production risks

THE RELATIONSHIP

One continuous owner, working with the team you have.

Not a parallel strategy track. Not a replacement for the engineers doing the work.
